SUMMARY

A motivated Computer Science student with a genuine interest in software development and solving real-world problems, eager to develop skills, expand knowledge, and achieve excellence in the field of technology.

EDUCATION

B.E. Computer Science and Engineering Aug 2024 – Present
College of Engineering, Guindy, Anna University **CGPA: 9.78**

Grade 12 Jun 2023 – Mar 2024
C.E.O.A Matriculation Hr. Sec. School, Madurai **Percentage: 98.16%**

Grade 10 Jun 2021 – May 2022
C.E.O.A Matriculation Hr. Sec. School, Madurai **Percentage: 97.8%**

SKILLS

Languages: C++, C, Java, JavaScript, Python (Basics)
Web Development: HTML, CSS, Bootstrap, React, Node.js, Express.js
Database: Oracle, MongoDB, MySQL
Tools: Git, GitHub, Postman, Docker

PROJECTS

Schedulix – Timetable Management System *React.js · Node.js · Express.js · MongoDB · Bootstrap*

- Developed a full-stack web application to automate academic timetable generation, eliminating scheduling conflicts and reducing manual effort through secure role-based access.
- Implemented timetable creation, faculty allocation, and classroom scheduling to reduce conflicts and streamline academic planning.
- Engineered a RESTful API backend with Express.js featuring JWT-based authentication, role-based authorization middleware (protect, authorize), request logging via Morgan, and structured error handling.

Docx - Document Q&A RAG Pipeline *React.js · Groq API · Node.js · Express.js · ChromaDB*

- Engineered a Retrieval-Augmented Generation (RAG) backend utilizing Express.js and Multer for PDF extraction, memory-efficient batch processing, and semantic chunking.
- Integrated local vector embeddings via Hugging Face Transformers and ChromaDB for high-dimensional semantic similarity search across document chunks.
- Connected the Groq API (Llama 3) to deliver context-grounded, fact-based answers, optimizing embedding workflows to stably handle large documents over 1,000 pages.

NearMart – Local Vendor Marketplace *React.js · Express.js · MongoDB · Redis · RabbitMQ*

- Architected and built NearMart, a microservices-based hyperlocal marketplace enabling local vendors to sell online, featuring geospatial vendor discovery via MongoDB 2dsphere indexing
- Implemented geospatial vendor discovery using MongoDB 2dsphere indexing with Redis-cached queries, and a database-enforced trust/review system.
- Designed an event-driven order pipeline across 8 independently deployable services with Razorpay payment integration, webhook signature verification, and a database-enforced trust/review system

LEADERSHIP

Official Representative July 2026 – Present

- Coordinate cross-functional communication between faculty and students, streamlining academic planning and event execution.

Joint Secretary – HR & Hospitality Domain Aug 2026 – Present
Computer Science & Engineering Association, CEG

- Managed HR operations, member coordination, volunteer engagement, and event execution in collaboration with student teams.

General Secretary – National Service Scheme Sept 2024 – Present

- Contributed to community service initiatives in a village while maintaining strong teamwork; recognized with the "Best Volunteer" award for outstanding community service.
